

FULL MOON

Kentucky Bluegrass (*Poa pratensis*)

The Advantages of Full Moon:

- ✓ Good heat tolerance
- ✓ Good disease resistance
- ✓ Perfect in Kentucky bluegrass blends

Growing success

Usage:

- Golf course fairways / Tees / Roughs
- Residential / Commercial turf / Sports turf
- Parks / Cemeteries
- Sod production

Growth Habit and Characteristics:

- Dark green color
- Medium-fine leaf texture
- Adapted to well-drained soils with pH 5.5–7.5

Performance Characteristics/Adaptations:

- Good heat tolerance
- Excellent stem rust and stripe rust resistance
- High seed yield
- Fusarium and leaf spot resistance

Establishment and Maintenance:

- Seed at 10–15 gr/m² during early fall or spring
- Keep seedbed moist during germination and establishment
- Expect germination in 14–21 days at minimum soil temperature of 12° C
- Full coverage expected in 8–10 weeks
- Mow when turf reaches 5 cm in height

Established Turf Maintenance:

- For best results, fertilize at annual rate of 15–20 gr/m² of nitrogen
- Irrigate deeply and infrequently. In absence of rainfall, irrigate lightly and frequently
- Recommended mowing height: 1–6 cm

2004 mean summer turf quality ratings for entries in a Kentucky bluegrass turf trial seeded fall of 2003 near Rolesville, NC, USA and maintained at 0.5" mowing height. LSD (0.05) = 1.3

Green = Scotts Professional Seed Varieties

2003 mean stem rust ratings for entries in a Kentucky bluegrass turf trial seeded fall of 2002 near Rolesville, NC, USA and maintained at 1.0" mowing height. LSD (0.05) = 2.1
